

State System of Higher Education Facilities Manual

Volume VII-E Special Projects Planning

Facilities projects that must be planned and programmed differently from most facilities projects due to particular requirements, either through legislation or Board of Governors' policy, are labeled as special projects. Facilities projects for repair and renovation or new construction of residences for university presidents, historic structures, statutory compliance, and those gifted or funded primarily from donations must be planned and programmed separately from other State System facilities projects, as discussed in Volume IX. Routine and preventative maintenance projects for these special facilities should be performed along with all other facilities.
